#### **DETAILED ACTION**

1. This is a response to the amendment filed on December 21, 2006. In virtue of this amendment, claims 1-11 are now presented in the instant application.

### Claim Objections

2. Claims 4-6 are objected to because of the following informalities:

Claim 4, line 6, "a varying component" should be changed to --the varying component--;

Claim 5, line 3, "a varying component" should be changed to --the varying component--; and

Claim 6, line 4, "a varying component" should be changed to –the varying component--.

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1, 4, 7, and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Kamoi et al. (U.S. 6,437,515 B1).

Application/Control Number: 10/500,682

Art Unit: 2821

Regarding claim 1, Kamoi discloses in figure 2 a circuit for a lamp (La) comprising a first sub-circuit (1A) for connecting to mains voltage (AC) of a predetermined frequency for rectifying the mains voltage (the rectifier [DB] for rectifying the main [AC] voltage to a DC voltage); a second sub-circuit (Q1-Q2) connected to the first sub-circuit (figure 2) for providing an alternating current required for the lamp (column 4, lines 52-67 and column 5, lines 1-4); and a control circuit (4A and 5A) which is connected to the first and the second sub-circuit (figure 2) and which controls the frequency of the alternating current subject to a varying component (11A) of the mains voltage rectified by the first sub-circuit (column 5, lines 5-17).

Regarding claim 4, Kamoi discloses in figure 2 that the control circuit (4A and 5A) is connected on one side to an switch (Q11) in the first sub-circuit and on the other side to one or more switches (Q1-Q2) in the switching device (inverter), so that the phase and/or frequency of the lamp current controlled by the switching device is controlled subject to a varying component (11A) of for instant 50 Hz or a multiple thereof (column 6, lines 36-51).

Regarding claim 7, Kamoi discloses in figure 2 that the second sub-circuit comprises an igniter (figure 2) for generating voltage pulse across the lamp so as to ignite the lamp (column 3, lines 26-52).

Regarding claim 10, Kamoi discloses in figure 2 a method for operating a lamp comprising the steps of rectifying (DB) a supplied mains voltage (AC) and bringing it to a desired voltage level (figure 2); and generating an alternating current (Q1-Q2) wherein

Application/Control Number: 10/500,682

Art Unit: 2821

the frequency of the alternating current is controlled subject to a varying component (11A) of the rectified mains voltage (column 4, lines 52-67 and column 5, lines 1-4).

## Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kamoi (U.S. 6,437,515 B1).

Regarding claims 8-9, Kamoi discloses every feature of the claimed invention, as expressly recited in claim 1, excluding a voltage ranges 100V-150V and 10V-100V of the rectified mains voltages. However, such a difference is not of patentable merits since the ranged voltages can be selected at a desired level based on a particular application or environment of use and such a selection of a design choice would have been involved with only routine skills in the art. Therefore, to employ the voltage ranges of Kamoi to be suitable to a desired application or environment of use would have been deemed obvious to a person skilled in the art.

# Allowable Subject Matter

7. Claims 2-3, 5-6 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/500,682 Page 5

Art Unit: 2821

8. The following is a statement of reasons for the indication of allowable subject matter:

Prior art of record fails to disclose or suggest the following limitations:

 Circuit for a lamp, comprising the first sub-circuit comprises a filter with one or more coils and capacitors, and a buffer capacitor that is coupled to its output terminals, in combination with the remaining claimed limitations as claimed in dependent claim 2.

 Claims 3, 5-6, and 11 were objected in the previous Office Action indicated the reasons of allowable subject matter.

### Response to Arguments

Applicant's arguments with respect to claims 1, 4, and 7-10 have been considered but are most in view of the new ground(s) of rejection.

#### Inquiry

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tung X. Le whose telephone number is 571-272-6010. The examiner can normally be reached on 8:30 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas Owens can be reached on 571-272-1662. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2821

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
